

First Rheocasting customer in India.

G-Plast limited will implement Rheocasting at the facility in India to support local and European customers in need of castings with higher properties

"With this installation at G-Plast we have found an interesting and competent partner and a first installation in India that we believe will create interesting opportunities for both our companies. India is a strong foundry nation and given the developments in the automotive and telecom industry we expect the development of Rheocasting in India to be fast"

Per Jansson, CEO of Comptech Rheocasting

About Rheocasting

Rheocasting is a semi solid process that delivers melts with high solid fraction to a low cost. The process is in roll out and is used on three continents with a growing number of installations. Typical components made with the process are: leak free components, heat sinks and other thermal management parts, high strength T6 treated components and structural thin wall parts.

About Comptech Rheocasting AB

The company develops, produces and delivers equipment and know how to the foundry industry and also supports designers as OEM's. R&D is a vital role and together with leading R&D institutes we develop alloys with high requirements and alloys with very low CO2 footprint. The main office is in Sweden with offices in Canada and China and with distributors in other countries.
